***Abstract:** Reserves of oil and coal are reduced from year to year. This in many ways affects the production of electricity. Therefore is necessary to turn to alternative sources. The first step to alternative energy in Serbia is construction of wind farms. The first wind farm in Southern Banat is "La Piccolina", which will supply electricity to about 5,500 households. The benefits of the wind farm are multiple, but also show clear progress in Serbia. This paper aims to inform the public about the benefits of wind farms, using of natural energy, and the way in which this may preserve the environment.*

***Keywords:** Wind farm, La Piccolina, natural energy.*
